Suitable for any weather

Fleece fabric keeps wearer dry and protected from snow and light rain

Nano-Tex has developed an All Conditions Fleece, designed to provide inherent protection from the elements, combined with the comfort, durability and easy-care characteristics of a traditional fleece. The company says All Conditions Fleece is the only fleece fabric that keeps the wearer dry and protected against snow and light rain, while also eliminating static cling and static attraction, for the life of the fabric. Bob Moran, senior vice president for US sales at Nano-Tex, says: "Whether it is the unexpected spring shower, or a winter blizzard, All Conditions Fleece will keep you warm, dry, comfortable and static free. The result is the perfect 'go anywhere, do anything' garment." Nano-Tex says the All Conditions Fleece represents the first offering in what will become a range of fleece fabrics designed to protect against all conditions that the wearer may encounter. The All Conditions Fleece is available in multiple weights and styles, including a standard double-sided fleece, microgrid and sweater knit.
